

Workshop

EXPLORING ETHICS IN
ARCHAEOLOGY AND HUMAN
EVOLUTION

Tuesday
8
APRIL
2025

Place and time to be confirmed

The study of the past through material traces, biological remains, and experiments generates a lot of ethical questions. The preservation of these archaeological remains and the destructive nature of some analyses are increasingly discussed, with efforts being made to rationalize the impact of our studies on archaeological collections.

Key Ethical Issues:

- Ensuring respect for the deceased individuals when manipulating their remains
- The contrasting treatment of animals and humans
- The consideration given to descendants or communities with emotional links to our studies
- The narratives promoted by and around some studies

To confirm your attendance at the workshop and/or to submit an oral presentation, please register:
